Job Description:

As a valued member of the C2TECH Software Engineering group, he/she is involved in the entire software product lifecycle including design, development, unit/integration testing as well as validation of current and future C2TECH products.

- Design, develop and integrate software modules that meet quality objectives, engineering methodologies and guidelines set by C2TECH
- Participate in requirements analysis phase and contribute to the High Level as well as detailed product specification documents when required
- Recommend enhancements, improvements, and innovations to the existing technology and recommend the development of new solutions and technology prototypes
- Conduct unit, integration, performance and, if required, system testing in a timely and cost-effective manner
- Establish technical documentation by writing design and test documents as well as drafting initial versions of product manuals for the corresponding parts
- Application/Management to National or International R&D Project funds from Development Agencies, TÜBİTAK, KOSGEB, and European Union
- Technical leadership and guidance of the project team
