Açık erişimli dergiler dizinidir, amacı açık erişimli kaynakların görünürlüğünü artırmak, bu sayede bilimsel ve akademik dergilerin kullanımına teşvik etmektir.
Tüm bilimsel ve akademik konuları kapsar.
Bilimsel ve akademik dergilerin tam metin olarak araştırma veya inceleme makalelerini yayınlamaktır.

About this Journal

Abstract and Applied Analysis is a mathematical journal devoted exclusively to the publication of high-quality research papers in the fields of abstract and applied analysis. Emphasis is placed on important developments in classical analysis, linear and nonlinear functional analysis, ordinary and partial differential equations, optimization theory, and control theory. Abstract and Applied Analysis supports the publication of original material involving the complete solution of significant problems in the above disciplines. Abstract and Applied Analysis also encourages the publication of timely and thorough survey articles on current trends in the theory and applications of analysis.

The most recent Impact Factor for Abstract and Applied Analysis is 1.318 according to 2011 Journal Citation Reports released by Thomson Reuters (ISI) in 2012.

Optimal Control for a Stationary Population

Ming Li, Qing Xie

Abstract

As one of the most important achievements in nonlinear science, population system has drawn wide attention and extensive research in the past few decades. However, population control is a systematic social project with much complexity for the reason that it involves knowledge in many aspects, such as functional analysis, differential equations, partial differential equations, operator theory. Through initiating a series of groundbreaking work on the issue of population control in China, our scientific workers have made a lot of achievements, which are valuable in terms of theory and practice, in understanding and addressing this issue in a correct way.

To conduct intensive research on the issue of optimal control is a right way to achieve that. They have made strict and detailed analysis to population system, whose results have a great influence on the family planning policy in China.

This paper starts from deducing the population equation and explaining its parameters meaning. Next, it gives the answer to a simple model. Based on stationary population model, this paper, considering population mortality and gaining factor (can only depend on age), gives its prediction to a more general case and tries to gain the optimal control towards population.
